Theorem 1 - Verification case 1

For every natural number n, n + 0 = n.

This follows from the definition of addition by zero.

Scope: one explicitly selected claim; no model has been invoked by this file.

Theorem 2 - Verification case 2

For every natural number n, n + 1 = n.

Deliberately false. The value n = 0 refutes the statement.

Scope: one explicitly selected claim; no model has been invoked by this file.

Theorem 3 - Verification case 3

For every natural number n, n * n >= n.

This statement is true, but the supplied rfl proof is invalid.

Failure of this proof attempt must not be reported as a false theorem.

Scope: one explicitly selected claim; no model has been invoked by this file.
